

Luis Alberto Reoyo Bolaños

SENIOR IN NETWORK SECURITY | TELCO & HARDENING SPECIALIST

11 years of experience as a telecommunications security technician, specialized in hardening and pentesting network devices. Currently holding CCNP Security, CCNP, and CEH certifications.

PROFESSIONAL EXPERIENCE

Category: **Blockchain Infrastructure Administrator**

Project: Genkipool (Cardano & Radix Stake Pool Operator) *(2021 - Present)*.

Function: Design, deployment, and administration of high-availability infrastructure on **Hetzner** cloud for maintaining validator nodes for **Cardano** and **Radix DLT** networks.

Implementation and management of virtualized environments with **Proxmox**, optimizing virtual machine performance for Relay Nodes and Block Producers.

Configuration of secure private networks using **WireGuard** VPN and strict firewall policies to ensure the integrity of inter-node communications.

Administration of automated backup systems, real-time monitoring (Prometheus/Grafana), and execution of critical protocol updates (Hard Forks) without service interruption.

Category: **Hacking with PHP Course Tutor**

Company: Information Service Areas (S.L.) Madrid *(2019 - 2022)*.

Function: Answering student questions and evaluating course activities, including: **LAMP** Hardening, **SQL injection**, **DoS** attacks, **XSS**, **CSRF**, **webShell**, **XXE**, **XML Bomb**, **LFI**, **RFI**, cookie hijacking, and **Tor**.

Category: **4G/5G Mobile Network Security Auditor and Pentester**

Company: Capgemini Engineering (formerly Altran Technologies) *(2017 - 2026)*.

Function: Technical security auditing and pentesting for Telefónica Spain's Next Generation Mobile Network (Red Única / NGN), ensuring the integrity of critical 4G/5G infrastructures under the **MITRE ATT&CK** framework.

Execution of penetration tests and vulnerability analysis on CORE and access nodes (RAN/SRAN), including equipment such as **HSS**, **HLR**, **MTAS/CSCF**, **BNG HL4**, **NRF**, **NEF**, **NCE**, **UPF LBO**, **SMF**, **SEPP**, and **AIRSCALE**.

Performing performance tests and Denial of Service (DoS/Flooding) attacks to validate the robustness of critical elements like **DRA VoLTE**, **CNEIR**, **BAF**, **ASOFA**, **vAFG**, **PTS**, and **CANG**.

Auditing signaling protocols (GTP, Diameter, SIP, SCTP, MAP) and securing network interfaces (N1, N2, N3, N4) to prevent interceptions and fraud in mobile networks.

Security evaluation of network management APIs (NEF/NCE) and hardening of virtualized network functions (VNF) under **3GPP** and **GSMA** security standards.

Category: **IP and Mobile Network Security and Hardening Specialist**

Company: Capgemini Engineering (formerly Altran Technologies) (2014 - 2026).

Function: Technical design in the security and hardening of critical IP and transport infrastructures for Telefónica Spain (**red RIMA, red Fusión, red Anillo, and red Rumba**).

Implementation of Hardening guides based on **CIS Benchmarks** and **STIG** standards for multi-vendor network equipment (Cisco, Juniper, Nokia, Huawei, Ericsson, and Red Hat).

Design and deployment of perimeter security controls, access policy management (**ACLs, Control Plane Policing**), authentication protocols (**RADIUS, TACACS+, LDAP**), and integration with **Linux PAM modules**.

Automation of compliance and hardening audits using **HP Network Automation** for configuration control in massive production environments.

Development of **SOP (Standard Operating Procedures)** technical documentation, standardization of security reports, and level 3 support in **FOA** (First Office Application) deployments.

PERSONAL / OPEN SOURCE PROJECTS

Project: **Radix DLT Rust SDK**

GitHub: github.com/genkipool/radixdlt-rust-sdk

Description: Development of native **Rust** SDK and tools for the Radix decentralized network, implementing off-ledger primitives that previously only existed in JS/TS.

Core & Cryptography: Implementation of **ROLA** proofs verification (Login with Radix), key management (Keystore), and transaction building.

P2P Connectivity: Development of modular transport clients using **WebRTC** and **Iroh** for direct and secure communication with the mobile Radix Wallet.

AI & MCP: Creation of `radixdlt-connector-mcp`, a local MCP server that allows AI agents to build and send transactions to the user's mobile for signing, without exposing private keys.

Project: **Intelligent Workspace (Chrome Extension)**

Status: In development (Beta Phase)

Description: Advanced productivity extension for Chromium browsers focused on workflow optimization through intelligent resource management and AI assistance, built with **TypeScript, Svelte**, and **JavaScript**.

Smart Tabs: Automatic grouping system by domains, subdomains, and customizable dynamic rules with session persistence and advanced search.

AI Assistant: Google Gemini integration for content summaries, contextual chat in a dedicated side panel, and scheduled automated queries.

Tools: Bookmark management, advanced history, cookie editor, text expansion (snippets), screenshots, and keyboard accessibility utilities.

Collaboration: Radix DLT Community Platform

Web: radix-community.genkipool.com

GitHub: github.com/genkipool/Radix_Community

Description: Comprehensive development of the official community platform for the Radix DLT ecosystem using **Next.js 15+** and **React 19**, focused on technology outreach and high-performance Web3 services.

Web3 & Blockchain: Implementation of wallet connection, advanced **Staking** management with validators, and real-time rewards visualization using the official Radix SDK.

Dashboard & Analytics: Development of an interactive control panel with dynamic charts (**Recharts**) and integrated transaction explorer for critical ecosystem metrics.

Infrastructure: Modern stack with **Tailwind CSS 4**, **Supabase**, **Redis (Upstash)** caching, and full multilingual support with a dynamic theme system.

ACADEMIC BACKGROUND

Degree: **Information and Computer Security Specialist**

Course: Postgraduate (30 credits)

Center: University of Castilla La Mancha

Degree: **CCNP Security (Cisco Certified Network Professional Security)**

Institution: Cisco Systems Inc

Center: CBCenter Training S.L.

Verification: [VHYXZZFL7DREQT33](#)

Degree: **CCNP (Cisco Certified Network Professional)**

Institution: Cisco Systems Inc

Center: CBCenter Training S.L.

Verification: [K1F43XVF1LQQ109Y](#)

Degree: **CEH - Certified Ethical Hacker (312-50 v10)**

Institution: EC-Council Certified Ethical Hacker

Center: EC-Council Exam Center

Degree: **Professional PHP Hacking Certificate (100 hours)**

Course: Hacking with PHP (100 hours)

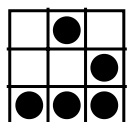

Center: The Security Sentinel

Degree: **Ethical Hacking (56 hours)**

Course: Ethical Hacking (56 hours)

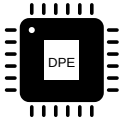

Center: Securízame

Degree: **Higher Technician in Electronic Product Development**

Course: Higher Degree

Center: I.E.S. Juan de la Cierva

SKILLS

Language: Python & PHP

Level: Professional

System: Linux

Level: Professional

Networking: Cisco & Juniper

Level: Professional

Language: English

Level: Technical

License: Driving

Type: B

Tools: Metasploit, Nmap, Scapy, GNS3

Level: Professional
